

MAT CLEANING INSTRUCTIONS

CARPET PRODUCTS — To help you get the best possible use of your mat and to maintain its appearance and usefulness over the longest possible time, manufacturer suggests:

WET SHAMPOOING

When daily care (vacuuming, etc.) fails to restore color of carpet surface due to excessive soil, shampooing is recommended. Use any neutral synthetic detergent with tepid water (1/2 cup per gallon of water). Hand brush method will yield good results. Use sponge or cloth to remove suds.

If carpet is matted with excessive soil, use detergent with brushing as described and follow by rinsing with cool water until soil is removed. Remove excess water with floor squeegee and place in an inclined position to drain dry. If on-site maintenance is not available, manufacturer recommends mat be sent to reputable rug cleaner and be professionally shampooed for a nominal cost. If professional shampooing is required, use only flat washing equipment, and temperature not exceeding 120°F. Manufacturer cannot be responsible for damage resulting from cleaning in rotary laundering equipment.

SPOT REMOVAL STAINS

When a spill occurs, absorb as much liquid as possible with any clean absorbant material. On oil or grease based stains, use dry cleaning fluid in small amounts and blot until stain is removed.

VACUUM OR BROOM DAILY

This is important in heavy traffic areas. Best results are obtained when carpet surface is dry.

SHEDDING OR FUZZING

A shedding or fuzzing condition is not a carpet defect, but rather common to all new fabrics. This will disappear after a few vacuumings.

RUBBER PRODUCTS

When must the mat be cleaned?

Daily, depending on usage.

How should I clean the mat?

Scrub thoroughly with a brush and rinse with hot water.

What should I use to clean the mat?

Mix mild detergent OR non-butyl degreaser with hot water.

DO NOT use BLEACH or any BUTYL-BASED DEGREASER regardless of where the mat is used. Usage of these chemicals will void the product warranty.

Exposing the mat to any other chemicals may adversely effect the service of this product.

Improper cleaning, handling, folding, or use of commercial dishwasher for cleaning mats will shorten expected useful life of the mat and may void the warranty.

STORAGE & HANDLING

Roll carpet in compact roll with pile facing out. Do not crush. Store in a moderate temperature and dry area.

CAUTION: If the borders on matting become broken or curled, the matting should be removed from service until the tripping hazard can be corrected.

Matting must never be stored on-end. This will cause the edges to curl and will void warranty. For proper storage, roll mat with top surface to the outside and lay flat in a protect area. Do not stack any materials or other matting on top of a stored mat.

When placing a mat into service, be certain that the floor to be covered and the back of the mat are completely free of dirt and debris. Foreign material on the floor or the mat will cause slippage and possible injury. Manufacturer will not be liable for any injuries resulting from failure to follow recommended housekeeping procedures. Frequent cleaning under mats is also required to maintain warranty.

Note: After removing from box, mat should lay flat in a warm, dry environment for several hours to allow it to relax and uncurl before placing into service.

Why this is important...

- Regular cleaning will prolong the life of carpet mats because of the reduced abrasion effect on the fibers
- Regular cleaning will maintain the mat's effectiveness over long periods of time thereby preventing accumulated dirt and moisture from being tracked into a facility
- Regular cleaning will maintain the mat's effectiveness over long periods of time thereby preventing accumulated dirt and moisture from being tracked into a facility
